

## Job Description

**Job title:** Test Technician

**Business Unit:** Colchester

**Division:** Operations

### **Role:**

We have an opportunity for a test technician to join the Operations department and work alongside our test engineers. We specialize in the wireless capture, delivery and management of high quality live video for the Broadcast & Media and the Law Enforcement, Public Safety & Defense markets, to provide the best view even in the most challenging conditions. A successful candidate will work in a dynamic ESD manufacturing environment. where the ability to switch tasks quickly and multi-task are essential. It will not suit those who enjoy routine!

### **Relationships:**

Reporting to Production and Customer Support Manager.

No direct reports. Liaison with other departments including Sales, Product Development and Operations.

### **Responsibilities:**

- Electronic and validation testing
- Documenting test results and logging serial numbers
- Firmware programming
- Electronic assembly
- Electronic re-work

**Essentials:**

The candidate should have ideally an ONC/OND (or equivalent) with practical experience of most of the following:

- Digital electronics, including use of test equipment such as oscilloscopes and digital multimeters, RF power meters, spectrum analysers
- Have an understanding of video transmission, video and audio standards.
- PTH/SMT assembly/re-work, down to 0402 size components.
- Fault finding on circuit boards

**Desirables:**

Ideally IPC qualified.

**Experience:**

Please be aware due to the company position and lack of public transport locally, candidates must have own transport.
